

Axia® Smart Chair | User Instructions

Press once to activate the Smart label.

The label will either show the **1 1hr mode** or the **2 live mode**.

An orange light will indicate the current mode. Press again to switch from one mode into the other.

In the **1hr mode**, the posture diagram shows the most frequently seated position in combination with the average sitting score for the past hour.

The **live mode** shows the current seating position and the corresponding sitting score. (There is a delay of half a second.)

Posture Diagram

The Smart Chair recognises seven different postures (see page 2). Each light on the diagram represents a sensor in the seat. Orange light indicates bad posture where as green lights indicate good posture or the correct sitting position.

Sitting Score

The scale from 1 - 5 indicates the users current or average sitting score. A sitting score of 3-4 is considered "healthy sitting" with appropriate movement.

The Smart chair will give a **tangible reminder** (vibration in the seat) once an hour if necessary, to encourage the correct sitting position. When the vibration is activated, the label switches on and shows the average sitting position and score.

How to test the tangible feedback / vibration

Switch the label on by pressing  once. Then hold the same button for five seconds. The last light of the score is flashing green to indicate that the chair is in test mode. Press  shortly again to start the vibration. (There will be a delay of 1-2 seconds.)

Axia[®] Smart Chair | User Instructions

Correct posture

Chair and workstation have to be set up correctly to enable the user to sit properly and therefore get the full benefits of the Axia Smart Chair.

Leaning to the left

Leaning to the right

Poor or no lower back contact

Poor or no upper back contact

Sitting on the front edge of the chair

Slouching

Axia[®] Chair | Set Up

To get the best from your Axia chair itself, you need to set up your chair in relation to your workstation.

Check the nomique website to learn how to **set up your workstation correctly**.
