

## TASK & ERGONOMIC

# Axia<sup>®</sup> 2.0

The Axia 2.0 Smart Seating System is an ergonomic, modular and award-winning task chair range. The Axia 2.0 task chair facilitates a well-supported yet relaxed posture to contribute to a healthier way of working.

The range comprises five different models, which differ in back height and style of back rest. All chairs are fitted with a synchronised (1:1) mechanism, based on the patented Axia principle of pelvic support rather than lumbar support. The mechanism offers tension control to adjust for body height and weight. Choose between Pro and Office (Office features an additional independent back angle adjustment) mechanism.

Axia 2.0 range is a completely modular system; parts can be easily interchanged and replaced. A wide range of ergonomic accessories are available.

## FEATURES AND OPTIONS

### DIMENSIONS

### ERGONOMIC PRINCIPLE

The Axia supports the pelvis to prevent it from rotating. A well **supported pelvis** will help the back to support itself and the **spine will stay in a natural position**. The arm rests do not move to ensure optimal **support of the arms** to keep shoulders and neck relaxed. Through a **patented split seat mechanism**, only the rear tilts back whereas the foremost part of the seat will always stay horizontal. This will **alleviate pressure on the legs**, keeping the **feet firmly on the floor**.
